New Natoli Tablet Press & Tooling Training Scheduled

Sharpen your skills in tablet press setup, operation, and maintenance procedures

ST. CHARLES, MO (May 9, 2022) — For years, one of Natoli Engineering's competitive advantage has been our broad array of training courses. Where many companies only sell tablet press tooling and machinery, Natoli offers in-house training seminars that give our customers an opportunity to learn how to operate and maintain the equipment to peak performance.

On June 14-16, Natoli starts its summer training season with our ***Tablet Press & Tooling: Applied Learning Experience*** session at our global headquarters in St. Charles, Missouri. The two-day seminar will teach students best practices for tablet press operation and maintenance. The course, which is offered a few times each year, is fully comprehensive, and each one provides students with the latest knowledge, research, and technology in tablet compression tooling. Supervisors, Quality Assurance & Quality Control personnel, and Maintenance Technicians at any stage are encouraged to attend.

Tableting mechanics taught by seasoned instructors

"Operators' jobs are hands-on, so their training should be, too!", says Dale Natoli. "The heavy focus on hands-on experience and classroom instruction provides the perfect balance to show attendees how tablet presses and tooling work in theory and in practice."

Upon completion, students will have learned:

- Assembly and disassembly of all main components of a rotary tablet press
- Mechanics of press failures and cam wear
- Relationships among maintenance, inspections, operations, and troubleshooting
